KWC ENIA E

Crystalline perfection

Crystalline perfection

KWC ENIA E – promising stainless-steel faucet for filtered drinking water and maximum durability in the kitchen.

Compelling quality, design and convenience – the KWC ENIA E makes everyday kitchen tasks a breeze with its easy operation and compact filter technology. Thanks to the dual, decoupled water lines and the antibacterial V4A stainless steel, it meets the highest hygiene standards. Whether mixed or filtered drinking water – operation is intuitive and effortless.

Stylish accents

Absolute drinking pleasure

Made of durable and recyclable V4A stainless steel, the KWC ENIA E meets the highest standards of quality and hygiene. The antibacterial material ensures maximum water purity and keeps the surface of the faucet clean.

Separate control system

The classic lever provides mixed water as usual, while simply rotating the separate knob also provides filtered drinking water.

Pillar faucet option

Filtered drinking water – the perfect complement to the classic kitchen faucet: the KWC pillar faucet makes it easy to retrofit filtered water using an existing soap dispenser hole or a separate washbasin.

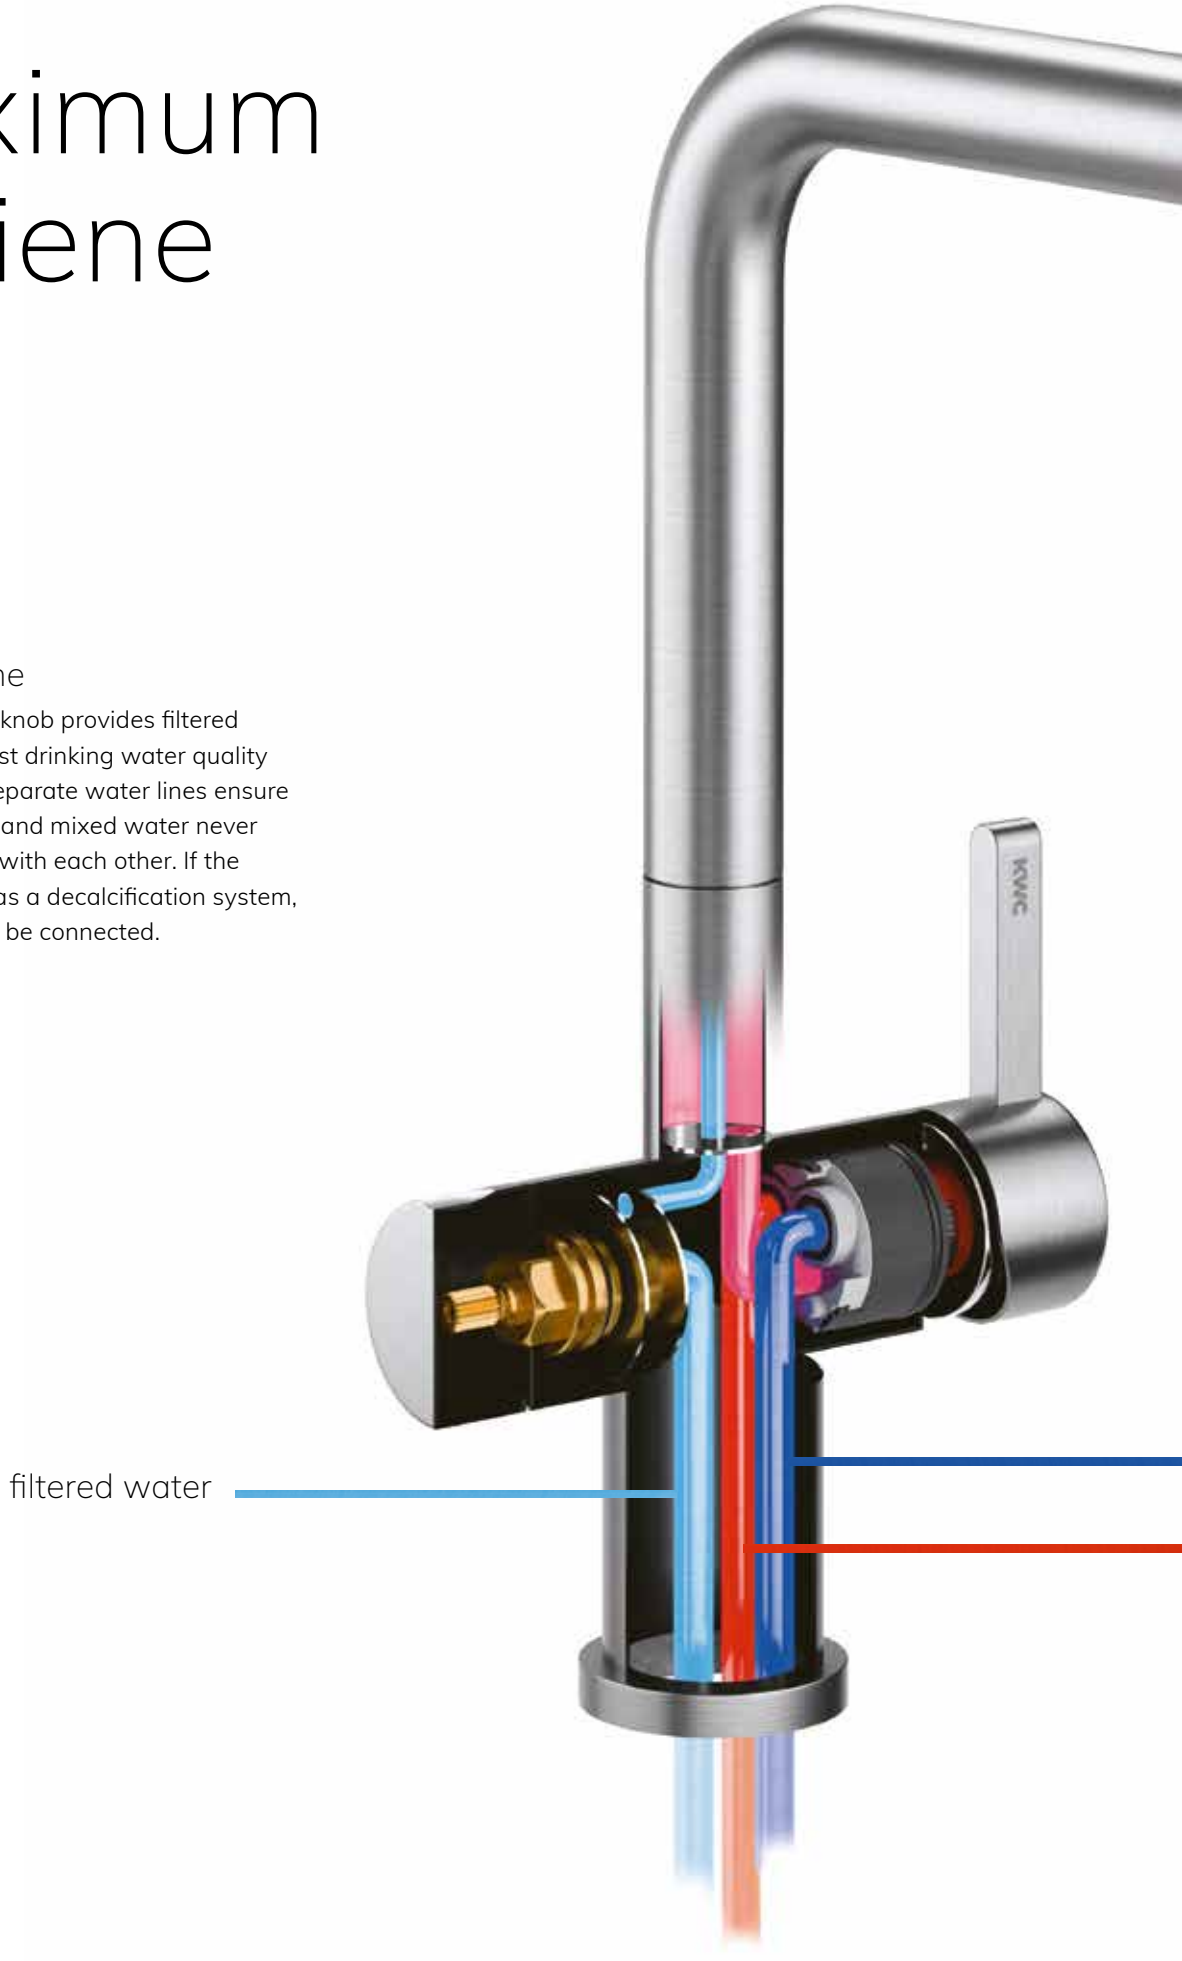
Two colour schemes

In brushed stainless steel or industrial black, the KWC ENIA E is a stylish eye-catcher and lends every kitchen an individual touch.

Maximum hygiene

Dual water line

Turning the rotary knob provides filtered water of the highest drinking water quality at any time. The separate water lines ensure that filtered water and mixed water never come into contact with each other. If the building already has a decalcification system, the raw water can be connected.



Separate channels

A unique selling point of the KWC ENIA E: dual, separate water lines with two stream types – filtered water and mixed water

Manual operation

The lever offers the usual convenience for everyday kitchen tasks: cold, hot or mixed water – whatever you need.

KWC FILTER

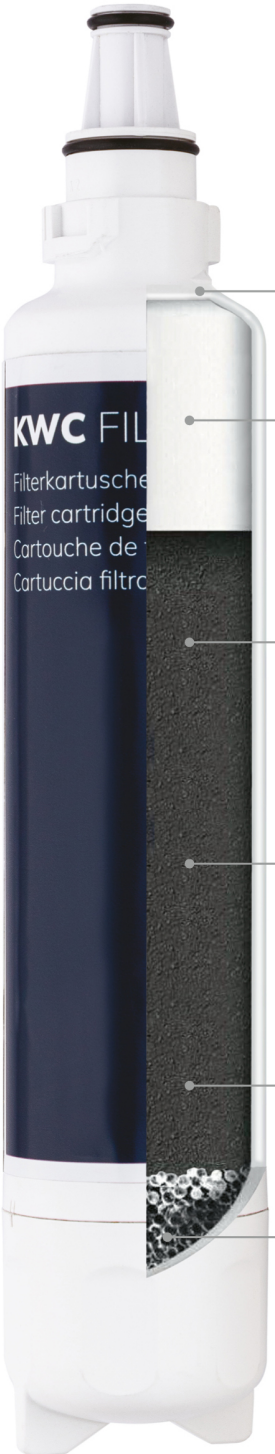
Compact power

Compact filter technology

The high-performance, compact filter effortlessly removes impurities and optimises water quality and taste in no time. With a capacity of 4,000 liters, it ensures long-lasting pure water. Assembly and replacement are carried out quickly and easily – a sustainable solution for healthy water directly from the faucet.
With similar dimensions to a folding rule (height 23 cm, diameter 4.5 cm), it can be easily integrated into any kitchen.

KWC FILTER

Filter technology and installation



Polypropylene housing

Prefiltration

A polypropylene media wrap reduces sediments, rust and other suspended particles down to 5 micron.

Chlorine reduction

The activated carbon block filter improves water quality by reducing chlorine taste and odor, as well as other organic contaminants.

Microfiltration

The graded density carbon block reduces microorganisms and particles down to 1 µm to improve water aesthetic and safety.

Bacteria inhibitor

Special blend media reduces bacteria growth in the filter media.

Scale inhibition

The scale inhibition technology sequesters calcium and magnesium to help protect the equipment from scale build-up and corrosion.

The KWC ENIA E activated carbon filter transforms faucet water into soft, clean drinking water – free from hazardous substances and microplastics. Installation can be performed either horizontally or vertically, depending on your needs.
If the building already has a decalcification system, the raw water can be connected.
